

How to Give a Crushed Pill With a Squeeze Treat

A tiny snack with a very important job

1

Gather the goodies

Grab the prescribed pill, a squeeze treat, a pill crusher and a clean plate.

2

Crush the pill

Place the pill in the crusher and twist until it becomes a fine powder.

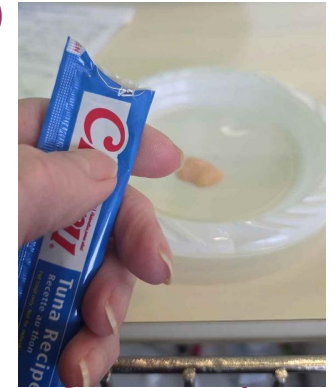

3

Get every speck

Open the crusher and remove ALL the powder. It likes to stick, so check the sides and grooves!

4

Start teeny tiny

Squeeze a very small amount of treat onto the plate. Less treat means less to finish.

5

Add the medicine

Place all of the crushed pill directly on top of the tiny dab of treat.

6

Make a sandwich

Cover the powder with a thin layer of treat. If there is lots of powder, stir it in completely.

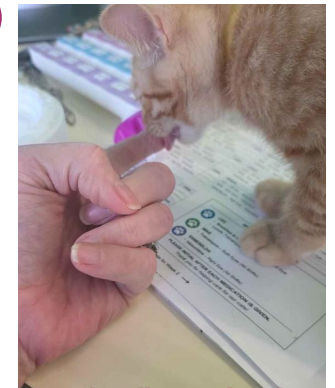

7

Serve your masterpiece

Offer it to the cat and make sure every last bit of the medicated treat is eaten.

8

Use the finger backup

If needed, put the tiny medicated bite on a clean finger and gently place it into the cat's mouth.

Important: Give only the prescribed dose and watch to make sure the cat swallows every bit.
